

JASON SELERIO

SOFTWARE ENGINEER

(+971) 50-448-2694
jason.selerio@gmail.com

meepmerp-0.github.io
Reem Island, Abu Dhabi, United Arab Emirates

Software Engineer specializing in full stack development, AI workflow automation, and modern web applications. Experienced in building scalable business solutions using React, React Native, Laravel, and cloud technologies, with a strong interest in AI driven software engineering and enterprise systems.

CORE COMPETENCIES

- Full Stack Development
- REST API Integration
- AI Automation
- React and Next.js
- Node.js and Laravel
- Database Design
- Agile Methodologies
- Git Version Control

EDUCATION

STI College Muñoz-EDSA
Quezon City, NCR, Philippines

Bachelor of Science in Information Technology
Completed in July 2026
Codafest Coding Champion
Invited to join StartupQC

LANGUAGES

- Filipino (Native)
- English (Professional Working Proficiency)

EXPERIENCES

- AI Engineer | Freelance**
INNERCIRCLE°
Abu Dhabi, UAE
<https://innercirclerealtors.com/>
May 2026 - Present

 - Designing multi agent AI workflows using n8n, APIs, and automation tools to streamline business processes.
 - Building AI assistants that automate customer communication, document generation, and internal workflows.
 - Integrating AI models with web applications to improve operational efficiency.
- Freelance Developer**
February 2026 - Present

 - Leveraging AI-assisted workflows and continuous research to deliver web experiences that improve guest access, automate response tracking, and streamline event coordination.
 - Created a digital christening invitation experience that made event information clearer, easier to access, and more mobile-friendly for guests.
 - Built a wedding website used by 50+ guests, centralizing event details, RSVPs, and coordination while reducing manual communication by 70%.
- Software Developer | Intern**
CliqueHA Information Services OPC
Makati City, Philippines
<https://cliqueha.com/>
February 2026 - May 2026

 - Collaborated in an Agile environment with distributed team members, maintaining steady progress and timely delivery across recurring updates.
 - Resolved production issues, enhanced application performance, and built frontend features using Laravel and Livewire.
 - Created detailed user manuals and software documentation, reducing client onboarding time by 25% and improving team efficiency by 15% through clear and structured guides.

Desktop Application Developer

JsquarEd Co. Ltd.
Manila, Philippines
July 2024 - August 2025

- Built a Windows inventory system in C# and SQL Server for a battery business, improving daily stock accuracy.
- Streamlined CRUD workflows and auto-generated battery IDs for faster, more reliable tracking.
- Added revenue logging and integrated the business's API for waybill generation and printing across Shopee, Lazada, and other orders.

PROJECTS

Christening Invitation

July 2026

Full-stack Developer | Personal Project

<https://remy-and-zoey.my.canva.site/>

Tech Stack: Canva

- Created a mobile-friendly digital christening invitation that improved event information clarity and accessibility for guests.
- Designed a responsive invitation experience that made event details easier to read and access on mobile devices.
- Built a clearer digital invitation format that enhanced guest experience and simplified event communication.

Wedding Invitation

February 2026

Full-stack Developer | Personal Project

<https://shesmydeamondhesmyjem.site>

Tech Stack: React, Google Apps Script, Vercel

- Built a wedding website used by 50+ guests, centralizing event details, RSVPs, and coordination, reducing manual communication by 70%
- Developed a custom RSVP system with real-time Google Sheets integration, automating 100% of response tracking and eliminating manual data entry.
- Designed and implemented a dynamic Google Photos gallery featuring over 200 images, achieving a 30% reduction in page load times through responsive lazy loading and optimization techniques.

Web-Based Timekeeping and Payroll System with Mobile Solutions

November 2025

Lead Developer & Project Leader | Capstone Project

<https://asseroglobal-phil.com>

Tech Stack: React, React Native, Node.js, PostgreSQL, SQLite

- Engineered a full-stack web and mobile system for security guard attendance and payroll, cutting processing time from 5-10 days to instant generation.
- Built real-time attendance verification utilizing face-api.js and React Native Vision Camera for daily use across multiple users, improving accuracy and reducing manual log errors.
- Integrated Supabase for real-time synchronization with row-level security, deployed the web platform on Vercel, and enabled GPS tracking and face recognition in the mobile app for workforce compliance.

Interactive 360° Property Tour

September 2024

Developer | School Project

<https://appdev360.netlify.app/>

Tech Stack: Pixel Camera - PhotoSphere, Panolens, Javascript, HTML

- Prototyped an interactive 360° property tour to improve online property browsing and viewing convenience.
- Captured and stitched 360° images using a guided camera workflow to create an immersive virtual walkthrough.
- Demonstrated how virtual tours can make property details easier to explore on mobile and web.
