

JASON SELERIO

SOFTWARE ENGINEER

+971 50 448 2694
jason.selerio@gmail.com

Portfolio: meepmerp-0.github.io
Abu Dhabi, United Arab Emirates

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience developing full stack web and mobile applications, business systems, and AI-driven automation solutions using React, React Native, Node.js, Laravel, and modern cloud technologies.

Experienced across software development, frontend and backend integration, REST APIs, database-driven applications, AI workflow automation, and production troubleshooting.

Built solutions spanning workforce management, payroll automation, inventory systems, event management platforms, AI assistants, and customer-facing digital applications, with demonstrated improvements in process efficiency, automation, and user experience.

CORE COMPETENCIES

Software Engineering | Full Stack Development | AI Automation | Web Application Development | Mobile Application Development | REST API Integration | Database Design | React & Next.js | React Native | Node.js | Laravel | Agile Development | Technical Documentation | Requirement Analysis | Problem Solving | Cross-Functional Collaboration

EDUCATION

STI College Muñoz-EDSA
Quezon City, NCR, Philippines

Bachelor of Science in Information Technology
Completed in July 2026

Achievements:

- Codafest Coding Champion
- Invited to join StartupQC

LANGUAGES

- Filipino: Native
- English: Professional Working Proficiency

EXPERIENCES

AI Engineer | Freelance
INNERCIRCLE°
Abu Dhabi, UAE
<https://innercirclerealtors.com/>
May 2026 - Present

- Design multi-agent AI workflows using n8n, APIs, and automation tools to streamline business processes and reduce manual activities
- Build AI assistants supporting customer communication, document generation, and internal operational workflows
- Integrate AI models with web applications to introduce AI-assisted functionality and improve process efficiency
- Research and apply emerging AI technologies, automation approaches, and agentic workflows to practical business use cases

TECHNICAL SKILLS

• **Software Engineering**

JavaScript | TypeScript | Java | C# | PHP | RESTful APIs | Agile Development | Requirement Analysis | Git Version Control | Technical Documentation | Production Troubleshooting

• **Full Stack Development**

React | Next.js | Vue.js | React Native | Expo | Livewire | Node.js | Laravel | HTML | Supabase

• **AI & Automation**

n8n | OpenAI | Claude | Codex | MCP | Prompt Engineering | LangGraph | AI Agentic Engineering | AI Model Integration | Workflow Automation

• **Databases**

PostgreSQL | MySQL | SQLite | MariaDB | MongoDB | NoSQL | SQL Server

• **Cloud, DevOps & Development Tools**

Docker | Vercel | GitHub Actions | CI/CD | SSH | Git | Visual Studio Code | Microsoft Visual Studio

• **Platforms**

Windows | Linux | Windows Subsystem for Linux

Software Developer Freelance Abu Dhabi, UAE February 2026 - Present	- Develop responsive web applications and digital experiences focused on accessibility, automation, and user experience - Build solutions that centralize event information, guest coordination, and response tracking - Implement real-time integrations to automate manual processes and improve data accuracy - Apply AI-assisted development workflows and continuous technical research throughout the development lifecycle - Design mobile-friendly interfaces optimized for usability across different devices
Software Developer Intern CliqueHA Information Services OPC Makati City, Philippines https://cliqueha.com/ February 2026 - May 2026	- Collaborated with distributed development teams in an Agile environment to support application releases and recurring software updates - Resolved production issues, enhanced application performance, and developed frontend features using Laravel and Livewire - Supported application troubleshooting and software enhancements based on business and user requirements - Produced structured user manuals and software documentation that reduced client onboarding time by 25% and improved team efficiency by 15% - Supported knowledge transfer through clear and structured technical documentation
Desktop Application Developer JsquarEd Co. Ltd. Manila, Philippines July 2024 - August 2025	- Developed a Windows-based inventory management system using C# and SQL Server for a battery business - Improved reliability and accuracy of daily inventory tracking through structured digital workflows - Designed and implemented CRUD functionality to simplify stock management and routine operational processes - Automated battery ID generation to improve data consistency and reduce manual processing - Added revenue logging functionality to support daily business and transaction monitoring - Integrated the company API to support waybill generation and printing for Shopee, Lazada, and other customer orders

SELECTED PROJECTS

Mobile Event Invitation Experience Full-stack Developer Personal Project Tech Stack: Canva	July 2026 https://remy-and-zoey.my.canva.site/
- Created a mobile-friendly digital invitation experience designed to improve clarity and accessibility of event information - Developed a responsive structure that made event details easier to access and navigate on mobile devices - Consolidated essential event information into a single digital experience to simplify guest communication	
EVENT RSVP & GUEST MANAGEMENT PLATFORM Full-stack Developer Personal Project Tech Stack: React, Google Apps Script, Vercel	February 2026 https://shesmydeamondhesmyjem.site
- Developed a responsive event management website used by more than 50 guests, centralizing event details, RSVP management, and guest coordination - Reduced manual event communication by 70% through centralized digital access to event information and responses	

- Built a custom RSVP system with real-time Google Sheets integration, automating 100% of response tracking and eliminating manual data entry
- Designed and implemented a dynamic Google Photos gallery supporting more than 200 images
- Applied responsive lazy loading and optimization techniques that reduced page load times by 30%

Workforce Timekeeping & Payroll Management Platform

November 2025

Lead Developer & Project Leader | Capstone Project <https://asseroglobal-phil.com>

Tech Stack: React | React Native | Node.js | PostgreSQL | SQLite | Supabase | Vercel

- Engineered a full stack web and mobile workforce management platform for security guard attendance and payroll processing
- Reduced payroll processing from approximately 5 to 10 days to instant generation through system automation
- Developed real-time attendance verification using face-api.js and React Native Vision Camera to improve attendance accuracy and reduce manual logging errors
- Implemented GPS tracking and face recognition functionality within the mobile application to support workforce attendance compliance
- Integrated Supabase for real-time data synchronization with row-level security
- Deployed the web platform through Vercel and integrated web and mobile components into a unified workforce management solution

Interactive 360° Property Tour

September 2024

Developer | School Project <https://appdev360.netlify.app/>

Tech Stack: Panolens, JavaScript, HTML, Pixel Camera PhotoSphere

- Prototyped an interactive 360-degree property viewing experience designed to improve online property exploration
- Captured and stitched 360-degree imagery using a guided camera workflow to create an immersive virtual walkthrough
- Developed an interactive browser-based property tour using Panolens, JavaScript, and HTML
- Demonstrated how virtual property tours can improve viewing convenience and accessibility across web and mobile devices
